

LIWARA CATHOLIC OUTSIDE SCHOOL HOURS CARE ADMINISTRATION OF MEDICATION POLICY

POLICY STATEMENT

The administration of medication to a child is considered a high risk practice and as such will be carefully planned and monitored to reduce any risk to children's health and well-being. Except in the case of an anaphylaxis or asthma emergency, no medication will be administered to a child without the authorisation of a parent or authorised person.

Only medication in its original container, bearing the original label and instructions and within the expiry or use by date will be administered to a child. This applies to all medications; regardless of whether they are prescribed or non-prescribed.

RATIONALE

All children have the right to experience quality education and care in an environment that provides for their health, safety and comfort. By implementing clear procedures for the administration of medication to children we aim to reduce health risks to children as a result of incorrect administration. Under the *Education and Care Services National Regulations 2012* all services must have a valid medications policy in place which must also be provided to parents.

GENERAL CONSIDERATIONS

Wherever possible medication should be administered by parents at home and if medication is being administered to a child at home the parent should advise educators of the nature of the medication, its purpose and any possible side effects.

Parents must be mindful of the service's policy in regard to children who are unwell and consider whether the child who requires medication is well enough to be at the service. Medications should not be used to mask the symptoms of illness in order for the child to attend care. Children who are unwell should be cared for away from the service.

Only prescribed medications or medications accompanied by an Emergency Action Plan, Medical Management Plan or explanatory letter from the child's doctor will be administered by educators for a period exceeding one day (See *Prescribed Medications* on page 2).

AUTHORISATION

Other than in an emergency, an authorisation to administer medication must be; provided on the *Medication Record* form available from <http://files.acecqa.gov.au/files/Templates/MedicationRecord.pdf> and; signed by a parent or person authorised in the child's enrolment record as authorised to consent to the administration of medication and the nominated supervisor or designated educator.

In an emergency authority to administer medication may be given verbally by a parent or a person authorised in the child's enrolment record as authorised to consent to the administration of medication. If a parent or authorised contact cannot be contacted for authorisation a registered medical practitioner or an emergency service may authorise administration.

Once the parent or authorised person has completed the form the designated educator or the nominated supervisor will verify the details against the dosage instructions prescribed or listed on the packaging in the case of a non-prescribed medication. The educator will also verify the product has not exceeded its expiry date and check the required storage conditions.

If any medication labels, information or instructions are written in a language other than English, the family must obtain an English version from their doctor or pharmacist prior to the service administering medication.

When authorising the use of a medication, other than an adrenalin auto-injector or other emergency medication, a parent or authorised person must verify that the child has received at least three previous

doses of the medication or has been taking the medication for at least 24 hours without showing an adverse reaction. No medication that is past the recommended 'use by' date will be administered.

PRESCRIBED MEDICATIONS

All prescribed medications must have the original pharmacist's dispensing label, or details provided by the doctor giving the child's name, name of medication, dosage, frequency and way it is to be administered, date of dispensing and expiry date.

A prescribed medication will only be administered to the person it has been prescribed for at the dose it has been prescribed at for the period of time for which it has been prescribed.

NON-PRESCRIBED MEDICATIONS

Educators will not administer non-prescribed medications for more than one day in a week without written medical authority. Cough and cold medicines will only be administered to children on the written advice of a medical practitioner.

Parents must print the child's name clearly on the medication to ensure the correct medication is given to the correct child.

STORAGE

All medication must be given directly to an educator and not left in the child's bag or locker.

All medication will be stored in accordance with the medication requirements in a position safely out of reach of children but readily accessible to educators.

The expiry date of emergency medications such as asthma relievers and adrenalin auto-injectors stored at the service will be recorded on a stored Medications Register and parents notified when replacement are due.

ADMINISTRATION

All medications, other than topical applications, will be checked by two educators before being administered to a child. Educators will verify the medication name, authorised dosage and the child it is to be administered to.

All oral medications will be administered by a qualified educator who holds a current first aid qualification and will be verified by a second educator.

Oral medications will be administered in accordance to doctors' advice or medication instructions.

Where the medication requires administration other than orally or by external application a qualified educator who holds a current first aid qualification and who has received specific instruction from a health care professional will administer the medication.

After administering medication the educator who has administered the medication will complete the *Medication Record* form recording the date, time, dosage and manner of administration. The educator must then sign the record and have it countersigned by the educator who verified the transaction.

Self administration of medication

- An authorisation for the child to self-administer medication is recorded in the Medication Record and authorisation must be sought from the child's parent / legal guardian and / or medical practitioner (if necessary).
- For asthma and diabetes or other similar ongoing medications, parents will be required to advise the nominated supervisor in writing whether their child will be responsible for administering their own medication or will require supervision and full details of how, when (ie at what intervals) and by whom all such treatment is to be administered.
